

QUICK INTRO TO **POLYGON**

When the stakes are high, smarter IAQ and climate control matters

Data centers and mission critical environments can no longer depend on fragmented data points and manual adjustments to maintain indoor air quality and climate conditions. For true speed and autonomy, stakeholders need access to continuous, real-time data and the ability to rapidly and reliably respond to changing conditions.

Polygon ExactAire: Real-time data meets automated climate control

ExactAire collects data on indoor air quality and potential water leaks throughout a building 24 hours a day.

Data is stored and transmitted to a centralized base station which then transfers encrypted information via a cellular network to secure web servers.

ExactAire.com desktop and mobile apps give users the ability to set and receive real-time alerts, track changes overtime, and configure reports.

ExactAire Smart Controller can automatically turn on and off Polygon or house equipment based on sensor data.

“Polygon [ExactAire] is a single-source of truth and turnkey solution.”

Joseph Bowen, Project Manager, DPR Construction for confidential data center client
